Five Months In...

Tim Holland, CFA

- When it comes to market reviews, typical look back periods are three months, or six months or a full year. At the risk of going rogue, we thought, as June kicks off, we would look back on the first five months of 2026, with a focus on what has hindered and helped risk assets during this rather remarkable year.
- The war in the Middle East has been the biggest macro event and headwind of 2026, and the biggest macro event since the COVID-19 pandemic, driving commodity prices, particularly oil, higher along with inflation and inflation expectations and driving consumer sentiment lower. We have also contended with the war of words between the White House and the then Jay Powell led Federal Reserve, uncertainty around trade policy, signs of distress in private credit and concerns AI was a capital spending and stock market bubble and an imminent disruptor of millions of white-collar jobs. Despite those headwinds, equity indices are up nicely in 2026, with the S&P 500 returning 11%, the Nasdaq 16.2%, the Russell 2000 18%, the MSCI EAFE Index 9.1% and the MSCI EM Index 25.4%.
- Any list of the positives that have overcome the negatives this year should begin with earnings – 2026 EPS growth for the S&P 500, MSCI EAFE and MSCI EM should range between 17% and 24%. What is driving that growth first and foremost is the AI build out – Amazon, Google, Meta and Microsoft are expected to spend \$725 billion+ on cap ex this year – and its worth noting the largest positions in the MSCI EAFE and EM Indices are tech names (and for the EM Index five of the ten largest stocks are tech names accounting for 26% of the index). Beyond but tied to earnings, has been the resiliency of the US consumer, buoyed by a resurgent jobs market and record household net worth, a result of historically high housing and equity prices (see chart), while increasing US productivity – a trend which AI may be accelerating – is aiding record profit margins. Finally, fiscal policy here at home and in key countries including Germany is supportive of economic growth.
- Though equities have rallied in 2026, inflation has pressured bond prices with the Bloomberg Aggregate Index off 0.8% this year. That written, a 60/40 MSCI All Country World Index and Agg portfolio is up 7% in 2026, a nice gain for five months in the market. We can only guess at what the next seven months will bring.

Looking Back to Last Week

Ben Vaske, BFA™

U.S. equity markets closed at new all-time highs for another consecutive week, with the S&P 500 gaining 1.6% and the NASDAQ 100 advancing 2.9% as falling oil prices provided a tailwind. WTI crude pulled back roughly 9% on the week to \$88 per barrel amid developing ceasefire talks in the Middle East, though it remains about 48% above where it stood when the conflict began. Two-thirds of the way through the second quarter, the NASDAQ 100 is up approximately 28% for the period, narrowly ahead of emerging markets at 26%. The broad commodity index retreated with oil but remains up roughly 25% year-to-date.

On the economic front, Q1 GDP was revised lower to 1.6% annualized growth, down from the initial reading of 2.0%, marking the second consecutive quarter of below-long-term-average expansion. The revision was driven primarily by weaker consumer spending on services and softer business investment. Separately, the PCE inflation reading came in as expected but at 3.8% year-over-year, its highest level in roughly three years, and now represents 62 straight months above the Fed's 2% target. The personal savings rate fell to just 2.6% as spending continues to outpace income growth, a dynamic that is unlikely to be sustainable and points to potential headwinds for consumer spending ahead.

Looking Ahead to This Week

Ben Vaske, BFA™

Welcome to June. The first week of the month brings the full suite of labor market data, including ADP Employment on Wednesday, followed by nonfarm payrolls and the unemployment rate on Friday. The unemployment rate is expected to hold steady at 4.3%. On the earnings calendar, Broadcom and CrowdStrike are the marquee names reporting after the close Wednesday. The Fed meeting on June 17th remains essentially a foregone conclusion, with markets pricing a 99.6% probability of no change in rates, making this week's employment data more relevant for the longer-term policy outlook under new Fed Chair Kevin Warsh.
